

Vision - Unlocking the AI Agent Economy

Unlocking the AI Agent Economy – Starting with Digital Marketing

- **In the AI-powered future**, data is the essential utility fueling agents
- Today, agents **lack scalable infrastructure** to access real-world tools.
- **Marketing** is the first killer use case — AI agents can hyper-personalize outreach.
- **OmniAgentHub** provides the rails for agents to run, monitor, and monetize workflows.
- **We start with marketing**, but the platform scales across all verticals.

Problem - The Integration & Monetization Bottleneck

Why AI agents can't scale today

- **Businesses face rising acquisition costs & declining organic reach**
- **SMBs and enterprises** lack resources to run multi-channel marketing
- **AI “vibe coding” is easy** — but running workflows in production is hard
- **No standard infrastructure** exists to integrate, monitor, and monetize agents
- **Result:** powerful models, but disconnected from real-world business impact

Starting Use Case: AI-Powered Marketing

OmniAgentHub's First Vertical – Smarter Outreach at Scale

- **AI agents design and launch** multi-channel outreach campaigns
- **Hyper-personalized messages** trained on best-performing outreach strategies
- **Real-time ICP matching** pulls contact lists (e.g., Apollo database integration).
- **Automated follow-up** across email + LinkedIn + chatbots
- **Campaign performance** continuously monitored, optimized, and monetized

Our Solution – OmniAgentHub.AI

A Full-Stack Platform for AI Agent–Tool Integration

- **Low-code MCP Builder** → convert APIs (Apollo, HubSpot, LinkedIn, Mail APIs) into agent-ready tools
- **Sandbox Testing** → simulate campaign workflows before launch
- **WEBAI Micropayments** → per-call billing, revenue-sharing, and audit logging
- **Marketplace** → agents discover marketing tools, run campaigns, and pay providers fairly
- **Marketing-first:** AI workflows run end-to-end in production, not just prototypes

Innovative AI Service Ecosystem

Low-code MCP Server Builder

Enables quick API service creation

Claude/GPT-powered Sandbox

Facilitates safe agent-tool interaction testing

WEBAI Micropayments

Provides fiat-pegged token for billing

Marketplace

Offers a platform for API tool discovery and monetization

Business Concept – OmniAgentHub.AI

Monetizing real-world tools in the agent economy

- **Build and publish** MCP-compatible APIs in minutes
- **Monetize tools** through secure, per-call blockchain payments
- Get discovered by **AI agents** via **searchable registry**
- **Unlock new revenue streams** from existing APIs and data services
- Participate in the **machine-to-machine economy** of the future

Web Interface & Developer API

Easy Monetization for Users and Teams

- Users can interact with agents through a web dashboard that tracks usage in real time.
- Developers access a robust API to automate billing, usage tracking, and payouts.
- Both platforms support transparent, per-use pricing and flexible monetization.
- Designed for both solo creators and enterprise teams.

Product Workflow - How It Works

From agent discovery to automated profit-sharing

- **AI agents query** the ***MCP*** registry to discover available tools and services dynamically
- **Agents integrate** tools without custom coding using plug-and-play ***MCP*** descriptors
- **Each API call triggers** an instant micro-payment to the tool provider
- **Multi-tool workflows** automatically split payments among all involved contributors

How We Meter and Price Fairly

Smart Billing with Real Transparency

- **Our custom MCP client** tracks every action an agent performs.
- **Each action is priced using:** tool cost + infrastructure + margin = final price.
- **Ensures that developers, agents, and service providers** all get paid fairly.
- **No need for agents** to handle billing logic manually—fully automated.

Developer Workflow - Empowering AI Tool Developers

Easy onboarding and instant monetization

- **Developers** register tools via the MCP SDK and define service capabilities and pricing.
- **Tools** become automatically discover-able to all compatible AI agents.
- **Developers** earn usage-based revenue every time their tools are called.
- **Real-time analytics** and revenue dashboard enhance transparency and trust.

AI Agent Benefits - Smarter, More Capable AI Agents

Enable AI agents to access unlimited tools

- **Agents can compose** complex workflows using multiple third-party tools
- **Payments are handled** automatically without requiring hard-coded billing logic
- **Flexible access** to specialized SLMs, APIs, and services via the marketplace
- **Unlocks new AI use cases** in finance, healthcare, gaming, logistics, and beyond

Unlocking New Possibilities with Advanced AI Agent Capabilities

Expanded Use Cases

Opens new opportunities for AI applications across industries.

Workflow Integration

Enables agents to create complex workflows using various tools.

Flexible Access

Provides adaptable access to specialized services and APIs.

Automated Transactions

Facilitates automatic payment processing without complex billing systems.

Simple, Familiar, Fair – WEBAI Credits

The Payment Rail of the AI Agent Economy

- **1 WEBAI = 1 USD** – stable, fiat-pegged token for predictability
- Used for **per-call transactions**, revenue sharing, and transparent audits
- **Works like cloud credits** – lowering friction for developers & enterprises
- **Powered by blockchain** smart contracts for security and automation

WEBAI Token Ecosystem

Stability

Maintains a 1:1 peg with USD for predictability

Transaction Use

Facilitates per-call transactions and revenue sharing

Cloud Credit Analogy

Functions like cloud credits to reduce friction

Blockchain Security

Utilizes smart contracts for security and automation

Why Blockchain Beats Web2 Payments

Faster, Cheaper, More Reliable

- **No credit card or crypto exchange fees**—saves 3–10% instantly.
- **Direct payment from buyer to seller**—no banks or payment processors.
- **Ideal for micropayments**—low transaction fees make per-call billing viable.
- **Reduces fraud and delays**—settlement happens in seconds.
- **Public blockchain Network** adds transparency and auditability by default.

Advantages of Blockchain in Payments

Faster Processing Times

Reduces delays in transactions

Cost-Effectiveness

Minimizes transaction fees

Reliability

Ensures security and transparency

Monetization Gaps in Today's Market

What Existing Platforms Miss

- **Most AI platforms offer** flat or subscription billing—not per-use fairness
- **No universal infrastructure exists** for tool-level billing within agent workflows
- **Developers struggle to monetize** modular tools at scale
- **OmniAgentHub** fills this gap with precision billing and developer-first design

Market Opportunity - A Rapidly Growing AI Agent Market

Positioned at the intersection of AI and blockchain

- **AI Agent Economy** projected at \$20B by 2027
- **AI Marketing Market** forecasted at \$82B by 2030
- **Over 30M SMBs** lack advanced marketing infrastructure
- **Marketing spend shifting rapidly** toward AI-driven personalization
- **OmniAgentHub** captures value by powering AI-first marketing agents

Strategic Positioning in the AI Agent Market

OmniAgentHub's Positioning

Positioned as default infrastructure

Early Adopters

Key industries include finance, crypto, healthcare

Market Size

Projected growth to exceed \$20B by 2027

Demand for Decentralized Ecosystems

Increasing need for open AI systems

Why Now ? - Perfect Timing for Disruption

Technology and market dynamics align

- **MCP standard** and agent ecosystem are gaining adoption across major AI platforms
- **Open-source LLMs** enable low-cost, domain-specific SLM development
- **Blockchain Layer 2** networks make micro-payments cheap, fast, and secure
- **Growing need** for fair monetization models for AI developers and tool providers

Go-to-Market Strategy

Developer-first launch and ecosystem adoption

- **Launch public beta** with 150+ developers on waitlist
- **Target** AI tool creators and SaaS platforms in data-heavy verticals
- **Build** high-value first-party MCP servers to drive usage
- **Form partnerships** with API and infrastructure providers
- **Offer** token-based incentives for early adopters and contributors

Developer Adoption Funnel

Our Team & Road-map

Experienced, Committed, and Scaling Fast

- **Eric Huang** (Co-Founder & CEO) – ex-SVP at Bank of America & Citigroup, expert in enterprise platforms & compliance
- **Bobby** (Co-Founder & CTO) – infrastructure engineer, expertise in scalable systems & blockchain payments
- **Roadmap:**
-  **Prototype built**; private alpha with early adopters
-  **Q4 2025 Public Beta** – builder, marketplace, and compliance-ready stack
-  **Onboard** 50+ developers and 5 enterprise pilots by year end

Competitive Landscape

OmniAgentHub.AI vs. Existing Approaches

- **RapidAPI** – marketplace, but no per-call monetization
- **Snowflake** – strong data infra, but not agent-first
- **LangChain/AutoGPT** – frameworks, but no billing/compliance
- **OmniAgentHub.AI** – only end-to-end infra for standardization + monetization

Agent infrastructure spectrum from framework to end-to-end solution.
